## Check for Mistakes in this Word Problem: Iate-ło-class?

Directions: You will be late to class if you have to walk more than 25 pixels to get there. Write a function that takes in your $x$-coordinate and $y$-coordinate and the $x$-coordinate and $y$ coordinate of the classroom and returns true if you will be late to class and false if you will be on time.

## Contract and Purpose Statement

Every contract has three parts ...

what does the function do?

## Examples

Write some examples, then circle and label what changes ...

| (EXAMPLE() late-to-class? |  | ) | (> | 25 | (distance | 40 | 55 | 65 | 80)) |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| function name | input(s) |  |  |  | what the function | on pro | duces |  |  |  |
| (EXAMPLE() late-to-class? |  | ) | (< | 25 | (distance | 40 | 55 | 65 | 80)) |  |

## Definition

Write the definition, giving variable names to all your input values ...

((< 25 (distance student-x student-y school-x school-y))) )
