

Check for Mistakes in this Word Problem: equal-length?

Directions: Write a function that takes in two strings and returns true if their lengths are equal and false otherwise.

Contract and Purpose Statement

Every contract has three parts ...

equal-length? : string string → boolean
function name domain range

; Given two strings, check if they are the same length
what does the function do?

Examples

Write some examples, then circle and label what changes ...

(EXAMPLE(equal-length? ("yes" "no"))
function name input(s)
(= (string-length "yes") (string-length "no"))
what the function produces)

(EXAMPLE(equal-length? ("dog" "cat"))
function name input(s)
(= (string-length "dog") (string-length "cat"))
what the function produces)

Definition

Write the definition, giving variable names to all your input values ...

(define(equal-length? string1 string2)
function name variables
(= string1 string2)
what the function does with those variables)
