### The Math Inside Video Games

- Video games are all about *change*: How fast is this character moving? How does the score change if the player collects a coin? Where on the screen should we draw a castle?
- We can break down a game into parts, and figure out which parts change and which ones stay the same. For example:
  - Computers use coordinates to position a character on the screen. These coordinates specify how far from the left (x-coordinate) and the bottom (y-coordinate) a character should be. Negative values can be used to "hide" a character, by positioning them somewhere off the screen.
  - When a character moves, those coordinates change by some amount. When the score goes up or down, it also changes by some amount.
- From the computer's point of view, the whole game is just a bunch of numbers that are changing according to some equations. We might not be able to see those equations, but we can definitely see the effect they have when a character jumps on a mushroom, flies on a dragon, or mines for rocks!
- Modern video games are *incredibly* complex, costing millions of dollars and several years to make, and relying on hundreds of programmers and digital artists to build them. But building even a simple game can give us a good idea of how the complex ones work!

### **Notice and Wonder**

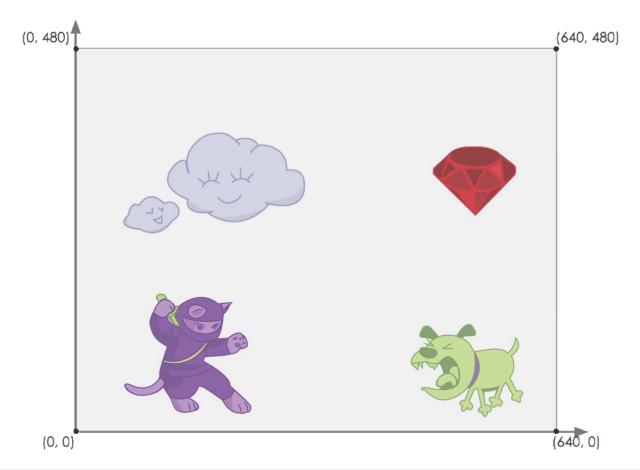

Write down what you notice and wonder about the Ninja Cat game screenshot.

"Notices" should be statements, not questions. What stood out to you? What do you remember?

What do you Notice?	What do you Wonder?

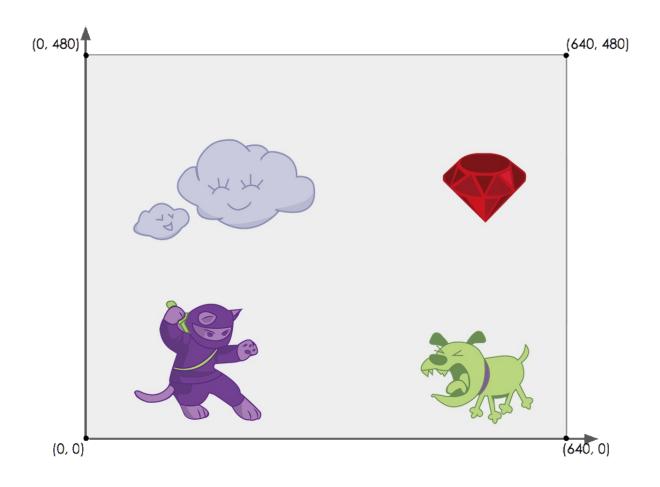

### Reverse Engineer a Video Game

What is changing in the game? The first example is filled in for you.

Thing in the Game	What Changes About It?	More Specifically?
Dog	Position	x-coordinate

### **Estimating Coordinates**

The coordinates for the PLAYER (NinjaCat) are: (\_\_\_\_\_\_\_, \_\_\_\_\_\_\_)

The coordinates for the TARGET (Ruby) are: (\_\_\_\_\_\_,

### **Notice and Wonder**

As one partner explores the Ninja Cat Desmos graph, the other student will write down what they Notice. Students will then switch roles and, as one partner explores the Ninja Cat Desmos graph, the other student will write down what they Wonder.

What do you Notice?	What do you Wonder?

### **Brainstorm Your Own Game**

Created by:
Background
Our game takes place:
In space? The desert? A mall?
Player
The Player is a
The Player moves only up and down.
Target
Your Player GAINS points when they hit The Target.
The Target is a
The Target moves only to the left or right.
Danger
Your Player LOSES points when they hit The Danger.
The Danger is a
The Danger moves only to the left or right.
Artwork/Sketches/Proof of Concept
Draw a rectangle representing your game screen, and label the bottom-left corner as the coordinate (0,0). Then label the
other four corners. Then, in the rectangle, sketch a picture of your game!

### **Order of Operations**

Order of Operations is incredibly important when programming. To help us organize our math into something we can trust, we can  $\mathit{diagram}$  a math expression using the Circles of Evaluation . For example, the expression  $1-4\div 10~\times~7$  can be diagrammed as shown below.

To convert a **Circle of Evaluation** into Code, we walk through the circle from outside-in, moving left-to-right. We type an open parenthesis when we *start* a circle, and a close parenthesis when we *end* one. Once we're in a circle, we first write the **function** at the top, then write the inputs from left to right. The circle above, for example, would be programmed as  $(/(10^{14}))$ 

### **Notice and Wonder**

Try typing numbers into the Interactions Area, hitting "Enter", and see what you get back! Some ideas:

- 1. What is the largest number you can enter? The smallest?
- 2. Can you write decimals? Fractions?
- 3. After you get back a decimal, try clicking on it. What happens?
- 4. Can you write negative numbers? Negative fractions?
- 5. What else can you try?

What do you Notice?	What do you Wonder?

### Completing Circles of Evaluation from Arithmetic Expressions

For each expression on the left, finish the Circle of Evaluation on the right by filling in the blanks.

	Arithmetic Expression	Circle of Evaluation  Circle of Evaluation
1	$4+2-\frac{10}{5}$	4 2 5
2	$7-1+5 \;  imes \; 8$	+ 7 1 *
3	$\frac{-15}{5+-8}$	/ + 5
4	(4+(9-8))   imes  5	* 4 9 8
5	$6 \times 4 + \frac{96}{5}$	4 9
*	$rac{20}{6+4} - rac{5 imes 9}{-12-3}$	20 + 3

### Matching Circles of Evaluation and Arithmetic Expressions

Draw a line from each Circle of Evaluation on the left to the corresponding arithmetic expression on the right.

**Circle of Evaluation** 

**Arithmetic Expression** 

1

A  $1 \div (1 \times 1)$ 

2

В

(1+1)-1

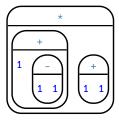

3

c  $(1 \times 1) \div 1$ 

D  $(1+(1-1)) \times (1+1)$ 

5

E  $(1-1) \times (1+1)$ 

### Translate Arithmetic to Circles of Evaluation & Code (Intro)

Translate each of the arithmetic expressions below into Circles of Evaluation, then translate them to Code.

	Arithmetic	Circle of Evaluation	Code
1	3   imes  7 - (1 + 2)		
2	3-(1+2)		
3	$3-(1+5 \;  imes \; 6)$		
4	1+5~ imes~6-3		

### **Completing Partial Code from Circles of Evaluation**

For each Circle of Evaluation on the left, finish the Code on the right by filling in the blanks.

	Circle of Evaluation	Code
1	16 <del>*</del> 6 -3	(+ (* 6))
2	- + 25 13	(
3	+ 28	((+
4	* 13 / 7 + 2 -4	(
5	+ / + 3 - 5 3	( (
6	/ + 7 9 2 4	(/ (+) (*))

### **Matching Circles of Evaluation & Code**

Draw a line from each Circle of Evaluation on the left to the corresponding Code on the right.

**Circle of Evaluation** 

Code

1

Α

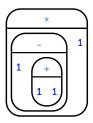

(\* (- 1 (+ 1 1)) 1)

2

В

(\* (- 1 1) (+ 1 1))

3

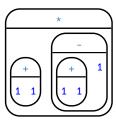

C (\* (+ 1 1) (- (+ 1 1) 1))

4

D

(-(+11))

5

Ε

(+ (-11)1)

### Translate Arithmetic to Circles of Evaluation & Code 2

Translate each of the arithmetic expressions below into Circles of Evaluation, then translate them to Code.

	Arithmetic	Circle of Evaluation	Code
1	6   imes  8 + (7 - 23)		
2	$18 \div 2 + 24   imes  4 - 2$		
3	$22-7\div 3+2$		
4	$24 \div 4   imes  2 - 6 + 20   imes  2$		

# Arithmetic Expressions to Circles of Evaluation & Code - Challenge

Translate each of the arithmetic expressions below into Circles of Evaluation, then translate them to Code.

Code			
Circle of Evaluation			
Arithmetic	$\frac{16+3^2}{\sqrt{49}-2}$	$45-9 \times (3+(2-4))-7$	$50 \div 5   imes  2 - ((3+4)   imes  2 - 5)$
	1	7	м

### **Introduction to Programming**

The **Editor** is a software program we use to write Code. Our Editor allows us to experiment with Code on the right-hand side, in the **Interactions Area**. For Code that we want to *keep*, we can put it on the left-hand side in the **Definitions Area**. Clicking the "Run" button causes the computer to re-read everything in the Definitions Area and erase anything that was typed into the Interactions Area.

### **Data Types**

Programming languages involve different data types, such as Numbers, Strings, Booleans, and even Images.

- Numbers are values like 1, 0.4, 1/3, and -8261.003.
  - Numbers are usually used for quantitative data and other values are usually used as categorical data.
- Strings are values like "Emma", "Rosanna", "Jen and Ed", or even "08/28/1980".
  - All strings *must* be surrounded in quotation marks.
- Booleans are either true or false.

All values evaluate to themselves. The program 42 will evaluate to 42, the String "Hello" will evaluate to "Hello", and the Boolean false will evaluate to false.

### **Operators**

Operators (like +, -, \*, <, etc.) are treated the same way as functions: after all, they have inputs and outputs and obey the same rules!

### **Applying Functions**

Applying functions (and operators!) works much the way it does in math. Every function has a name, takes some inputs, and produces some output. The function name is written first, followed by a list of *arguments*.

- In math this could look like f(5) or g(10,4).
- In WeScheme, these examples would be written as (f 5) and (g 10 4).
- Appling the operator + to the inputs 1 and 2 would look like (+12).
- Applying a function to make images would look like (star 50 "solid" "red").
- There are many other functions, for example num-sqr, num-sqrt, triangle, square, string-repeat, etc.

Functions have *contracts*, which help explain how a function should be used. Every contract has three parts:

- The Name of the function literally, what it's called.
- The *Domain* of the function what *types of values* the function consumes, and in what order.
- The Range of the function what type of value the function produces.

### **Numbers and Strings**

Make sure you've loaded the wescheme.org editor, clicked "Run", and are working in the *Interactions Area*.

•			
1	$\mathbf{m}$	ma	

1) Try typing 42 into the Interactions Area and hitting "Enter". What is the largest number the editor can handle?
2) Try typing 0.5. Then try typing .5. Then try clicking on the answer. Experiment with other decimals. Explain what you
understand about how decimals work in this programming language.
3) What happens if you try a fraction like 1/3 ?
4) Try writing negative integers, fractions and decimals.
Strings
String values are always in quotes.
5) Is 42 the same as "42" ? Why or why not? Write your answer below:
6) Try typing your name (in quotes!).
7) Try typing a sentence like "I'm excited to learn to code!" (in quotes!).
8) Try typing your name with the opening quote, but without the closing quote. Read the error message!
9) Now try typing your name without any quotes. Read the error message!
10) Explain what you understand about how strings work in this programming language.

### **Booleans**

Boolean-producing expressions are yes-or-no questions and will always evaluate to either true ("yes") or false ("no"). What will each of the expressions below evaluate to? Write down your prediction in the blanks provided and then type the code into the interactions area to see what it returns.

		Computer				Computer
	Prediction:	Returns:			Prediction:	Returns:
1) (<= 3 4)			2)(string>	? "a" "b")		
3) (= 3 2)			4)(string<	? "a" "b")		
5) (< 2 4)			6)(string=	? "a" "b")		
7) (>= 5 5)			8)(string<	>? "a" "a")		
9) (>= 4 6)			10)(string	>=? "a" "a")		
11) (<> 3 3)			12)(string	<>? "a" "b")		
13) In your own words,	describe what	< does.				
14) In your own words,	describe what	>= does.				
15) In your own words,	describe what	<> does.				
				Prediction:	Computer	Returns:
16)(string=? "a	tree" "tree	es")				_
17)(string=? "tr	ee" "tree")			-		_
18) (string-conta	ins? "catna	ap" "cat")				_
19)(string-conta	nins? "cat"	"catnap")				_

20) How many **Numbers** are there in the entire universe?

21) How many Strings are there in the entire universe?22) How many Images are there in the entire universe?23) How many Booleans are there in the entire universe?

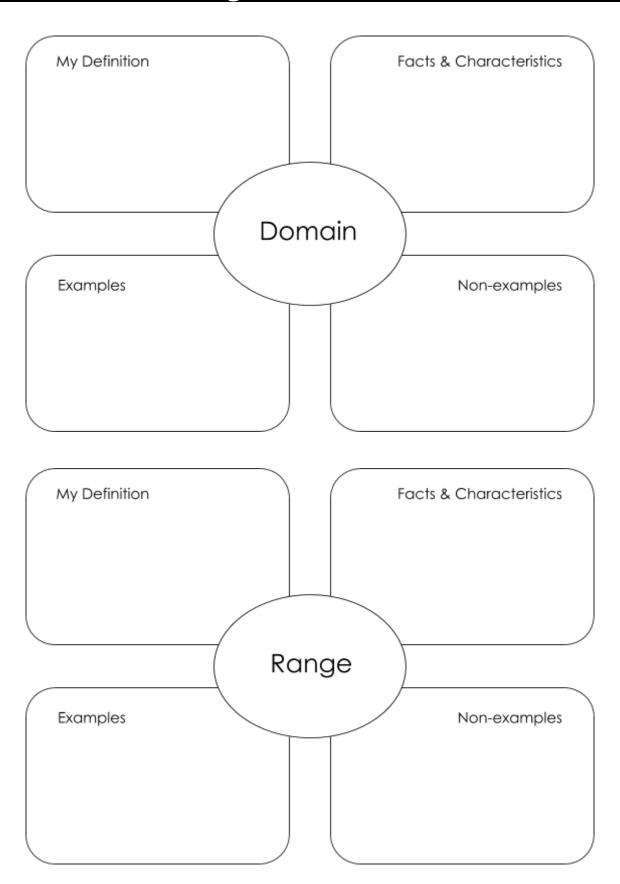

### **Applying Functions**

Type this line of code into the interactions area and hit "Enter":

(triangle 50 "solid" "red")

1	What is the name of this function?				
2	What did the expression evaluate to?				
3	How many arguments does triangle expect?				
4	What data type does the triangle function produce?  (Numbers? Strings? Booleans?)				
5) (	Catching Bugs  triangle 20 "solid")  triangle: expects 3 arguments, but given 2: 20 solid at: line 1, column 0, in <interactions></interactions>				
Can	you spot the mistake?				
6) (	triangle "solid" "red" 20)  triangle: expects a non-negative number as 1st argument, but given: solid; other arguments were: red 20 at: line 1, column 0, in <interactions></interactions>				
Can	you spot the mistake?				
7) (	triangle 20 40 "solid" "red")  triangle: expects 3 arguments, but given 4: 20 40 solid red at: line 1, column 0, in <interactions></interactions>				
Can	you spot the mistake?				
8) (	triangle 20 solid "red")  solid: this variable is not defined at: line 1, column 0, in <interactions></interactions>				
Can	you spot the mistake?				
9) (	triangle 20 "striped" "red")  triangle: expects a style ("solid" / "outline") or an opacity value [0-255]) as 2nd argument, but given: "striped"; other arguments were: 20 "red" at: line 1, column 0, in <interactions></interactions>				
Can	you spot the mistake?				

### Domain and Range

### **Practicing Contracts: Domain & Range**

Consider the following contract:

is-beach-weather :: Number, String -> Boolean
1) What is the <b>Name</b> of this function?
2) How many arguments are in this function's <b>Domain</b> ?
3) What is the <b>type</b> of this function's <b>first argument</b> ?
4) What is the <b>type</b> of this function's <b>second argument</b> ?
5) What is the Range of this function?
6) Circle the expression below that shows the correct application of this function, based on its contract.
A. (is-beach-weather 70 90)
B. (is-beach-weather 80 100 "cloudy")
C. (is-beach-weather "sunny" 90)
D. (is-beach-weather 90 "stormy weather")
Consider the following contract:  cylinder :: Number, Number, String -> Image
7) What is the <b>Name</b> of this function?
8) How may arguments are in this function's <b>Domain</b> ?
9) What is the <b>type</b> of this function's <b>first argument</b> ?
10) What is the type of this function's second argument?
11) What is the <b>type</b> of this function's <b>third argument</b> ?
12) What is the Range of this function?
13) Circle the expression below that shows the correct application of this function, based on its contract.
A. (cylinder "red" 10 60)
B. (cylinder 30 "green")
C. (cylinder 10 25 "blue")
D. (cylinder 14 "orange" 25)

### **Matching Expressions and Contracts**

Match the contract (left) with the expression described by the function being used (right).

	Contract	Expression
; make-id :: String, Num	mber -> Image 1	A (make-id "Savannah" "Lopez" 32)
; make-id :: String, Number, Str	ring -> Image 2	B (make-id "Pilar" 17)
; make-id :: Str	ring -> Image 3	C (make-id "Akemi" 39 "red")
; make-id :: String, Str	ring -> Image 4	D (make-id "Raïssa" "McCracken")
; make-id :: String, String, Num	mber -> Image 5	E (make-id "von Einsiedel")

Contract		Expression
; is-capital :: String, String -> Boolean	6	A (show-pop "Juneau" "AK" 31848)
; is-capital :: String, String, String -> Boolean	7	B (show-pop "San Juan" 395426)
; show-pop :: String, Number -> Image	8	C (is-capital "Accra" "Ghana")
; show-pop :: String, String, Number -> Image	9	D (show-pop 3751351 "Oklahoma")
; show-pop :: Number, String -> Number	10	E (is-capital "Albany" "NY" "USA")

### **Using Contracts**

Use the contracts to write expressions to generate images similar to those pictured.

ellipse:: Number, Number, String, String -> Image

What changes with the first number?	
What about the shape changes with the second Number?	
Write an expression using ellipse to produce a circle.	

regular-polygon :: Number, Number, String, String -> Image

What changes with the first Number?	
What about the shape changes with the second Number?	
Use regular-polygon to write an expression for a square!	
How would you describe a <b>regular polygon</b> to a friend?	

### **Using Contracts (continued)**

Use the contracts to write expressions to generate images similar to those pictured.

rhombus :: Number, Number, String, String -> Image

Write an expression for a square (rotated) using rhombus!	
What variable changes with the first Number?	
What variable changes with the second Number?	

### **Triangle Contracts**

1) What kind of triangle does the triangle function produce?
There are lots of other kinds of triangles! And WeScheme has lots of other functions that make triangles!
triangle:: Number, String, String -> Image
right-triangle:: Number, Number, String, String -> Image
isosceles-triangle:: Number, Number, String, String -> Image
triangle/sas:: Number, Number, String, String -> Image
2) Why do you think triangle only needs one number, while right-triangle and isosceles-triangle need two
numbers and triangle/sas needs three?
2) Marie 1 1 1 1 1 2 2 2 2 2 2 2 2 2 2 2 2 2 2
3) Write right-triangle expressions for the images below. One argument for each should be 100.
<b>\</b>
4) What do you think the numbers in right-triangle represent?
5) Write isosceles-triangle expressions for the images below. 1 argument for each should be 100.
<b>A</b>
6) What do you think the numbers in isosceles-triangle represent?
-, · · · · · · · · · · · · · · · · · · ·

7) Write 2 expressions that would build  $\[right-isosceles\]$  triangles. Use  $\[right-triangle\]$  for one expression and  $\[right-triangle\]$  for the other expression.

### Radial Star

```
radial-star:: (

points :: Number,
  inner-radius :: Number,
  full-radius :: Number,
  style :: String,
  color :: String
) -> Image
```

Using the detailed contract above, match each image to the expression that describes it.

Image			Expression
*	1	Α	(radial-star 5 50 200 "outline" "black")
*	2	В	(radial-star 7 100 200 "solid" "black")
	3	С	(radial-star 7 100 200 "outline" "black")
	4	D	(radial-star 10 150 200 "solid" "black")
M	5	E	(radial-star 10 20 200 "solid" "black")
*	6	F	(radial-star 100 20 200 "solid" "black")
*	7	G	(radial-star 100 100 200 "outline" "black")

What's on your mind?				

### Diagramming Function Composition f:: Number -> Number g:: Number -> Number Consumes a number, adds six to produce the result f(x) = 3x g(x) = x + 6 h:: Number -> Number Consumes a number, adds subtracts one to produce the result f(x) = 3x

For each function composition diagrammed below, translate it into the equivalent Circle of Evaluation for Order of Operations. Then write expressions for both versions of the Circles of Evaluation, and evaluate them for x=4. The first one has been completed for you.

Function Composition	Order of Operations	Transl	ate & Evaluate
$ \begin{array}{c} (1 \\                                   $	Composition:	(h (g (f x)))	
	Operations:	(- (+ (* 3 x) 6) 1)	
	3 x	Evaluate for x = 4	h(g(f(4)))=27
(2		Composition:	
( f		Operations:	
		Evaluate for x = 4	
(3		Composition:	
f h		Operations:	
9		Evaluate for x = 4	
(4		Composition:	
(h)		Operations:	
9		Evaluate for x = 4	

### Function Composition — Green Star

1) Draw a Circle of Evaluation and write the Code for a solid, green star, size 50.

Circle of Evaluation:

Code: Using the star described above as the original, draw the Circles of Evaluation and write the Code for each exercise below. 2 A solid, green star, that is triple the size of the original 3 A solid, green star, that is half the size of the original (using scale) (using scale) Circle of Evaluation: Circle of Evaluation: Code: Code: 4 A solid, green star of size 50 that has been rotated 45 5 A solid, green star that is 3 times the size of the original degrees counter-clockwise and has been rotated 45 degrees Circle of Evaluation: Circle of Evaluation:

### Function Composition — Your Name

You'll be investigating these functions with your partner:

1) In the editor, write the code to make an image of your name in big letters in a color of your choosing using text. Then draw the Circle of Evaluation and write the Code that will create the image.

**Circle of Evaluation:** 

Code:					
Using the "image of your name" described above as the original, draw the Circles of Evaluation and write the Code for each					
exercise below. Test your ideas in the editor to make sure they work.					
2 The framed "image of your name".  Circle of Evaluation:	3 The "image of your name" flipped vertically.  Circle of Evaluation:				
Code:	Code:				
4 The "image of your name" above "the image of your name" flipped vertically.  Circle of Evaluation:	5 The "image of your name" flipped horizontally beside "the image of your name".  Circle of Evaluation:				
Code:	Code:				

### Function Composition — scale-xy

You'll be investigating these two functions with your partner:

; scale/xy :: Number, Number, Image -> Image ; overlay :: Image, Images -> Image

The Image:	Circle of Evaluation:	Code:	
•	rhombus 40 90 "solid" "purple"	(rhombus 40 90 "solid" "purple")	

Starting with the image described above, write the Circles of Evaluation and Code for each exercise below. Be sure to test your code in the editor!

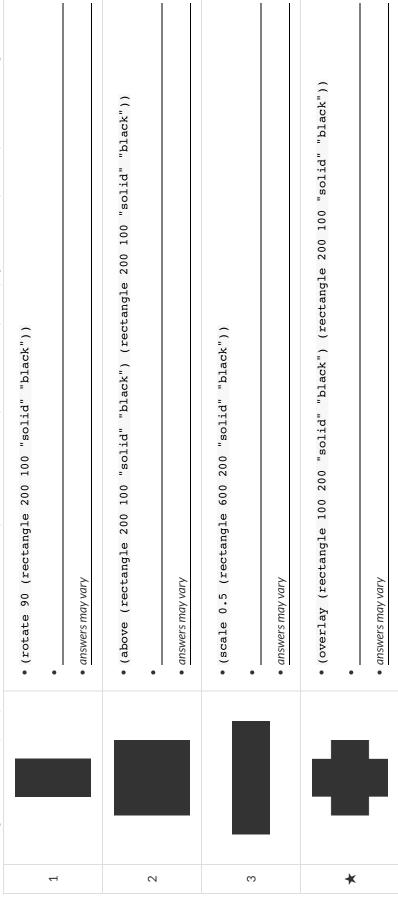

1 A purple rhombus that is stretched 4 times as wide.  Circle of Evaluation:	2 A purple rhombus that is stretched 4 times as tall Circle of Evaluation:
Code:	Code:
3 The tall rhombus overlayed on the wide rhombus.  Circle of Evaluation:	★: Overlay a red rhombus onto the last image you made.  Circle of Evaluation:
Code:	Code:

## More than one way to Compose an Image!

Read through these 4 expressions and try to picture the images they are composing. If you're not sure what they'll look like, type them into the interactions area of your editor and see if you can figure out how the code connects to the image.

```
(beside (rectangle 200 100 "solid" "black")(square 100 "solid" "black"))
                                                                                              (scale 2 (rectangle 100 100 "solid" "black"))
                                           (scale/xy 1 2(square 100 "solid" "black"))
                                                                                                                                                                                                                                                                                                                                        (rectangle 100 50 "solid" "black")))
                                                                                                                                                                                                                                                                                       (rectangle 200 100 "solid" "black")
                                                                                                                                                                                            (rectangle 100 50 "solid" "black")
                                                                                                                                                                                                                                               (above
```

For each image below, identify 2 expressions that could be used to compose it. The bank of expressions at the top of the page includes one possible option for each image.

### **Defining Values**

In math, we use values like -98.1, 2/3 amd 42. In math, we also use expressions like  $1 \times 3$ ,  $\sqrt{16}$ , and 5-2. These evaluate to results, and typing any of them in as code produces some answer.

Math also has **definitions**. These are different from values and expressions, because they *they do not produce results*. Instead, they simply create names for values, so that those names can be re-used to make the Math simpler and more efficient.

Definitions always have both a name and an expression. The name goes on the left and the value-producing expression goes on the right, separated by an equals sign:

```
x = 4y = 9 + x
```

The name is defined to be the result of evaluating the expression. Using the above examples, we get "x is defined to be 4, and y is defined to be 13". **Important: there is no "answer" to a definition**, and typing in a definition as code will produce no result.

Notice that definitions can refer to previous definitions. In the example above, the definition of y refers to x. But x, on the other hand, cannot refer to y. Once a value has been defined, it can be used in later expressions.

In WeScheme, these definitions are written a little differently, making it clear that we're talking about definitions: Try typing these definitions into the Definitions Area on the left, clicking "Run", and then *using* them in the Interactions Area on the right.

```
(define x 4)
(define y (+ 9 x))
```

Just like in math, definitions in our programming language can only refer to previously-defined values.

Here are a few more value definitions. Feel free to type them in, and make sure you understand them.

```
(define x (+ 5 1))
(define y (* x 7))
(define food "Pizza!")
(define dot (circle y "solid" "red"))
```

### **Defining Values - Explore**

Open the Defining Values Starter File and click run.
1) What do you notice?
2) What do you wonder?
Look at the expressions listed below. Think about what you expect each of them to produce. Then, test them out one at a
time in the Interactions Area.
• x
• (+ x 5)
• (- y 9)
• (* x y)
• z
• t
• gold-star
• my-name
• swamp
• 5pi
3) What have you learned about defining values?
4) Define at least 2 more variables in the definitions area, click run and test them out. Once you know they're working, record the code you used below.

### **Defining Values - Chinese Flag**

- 1) What image do you see repeated in the flag?
- 2) Highlight or circle all instances of the structure that makes the repeated image in the code below.
- 3) In the code below, highlight or circle all instances of the expression for that image.

```
(put-image
 (rotate 40 (star 15 "solid" "yellow"))
 120 175
     (put-image
         (rotate 80 (star 15 "solid" "yellow"))
         140 150
             (put-image
                 (rotate 60 (star 15 "solid" "yellow"))
                 140 120
                     (put-image
                         (rotate 40 (star 15 "solid" "yellow"))
                         120 90
                             (put-image
                                 (scale 3 (star 15 "solid" "yellow"))
                                 60 140
                                     (rectangle 300 200 "solid" "red")))))))
```

- 4) Write the code to define a value for the repeated expression.
- 5) Open the Chinese flag starter file. (Wescheme) and click Run.

Then type china into the interactions area and click Enter.

- 6) Save a copy of the file, and simplify the flag code using the value you defined. Click Run, and confirm that you still get the same image as the original.
- 7) Now change the color of all of the stars to black, in both files. Then change the size of the stars.
- 8) Why is it helpful to define values for repeated images?

### Challenge:

- This file uses a function we haven't seen before! What is it?
- Can you figure out its contract? Hint: Focus on the last instance of the function.

### Why Define Values?

- 1) Complete the table using the first row as an example.
- 2) Write the code to define the value of sun.

	Original Circle of Evaluation & Code	†	Use the defined value sun to simplify!
	scale  3 radial-star  30 20 50 "solid" "yellow"	1	scale 3 sun
	Code: (scale 3 (radial-star 30 20 50 "solid" "yellow"))	1	Code: (scale 3 sun)
36	frame radial-star 30 20 50 "solid" "yellow"	1	
	Code: (frame (radial-star 30 20 50 "solid" "yellow"))	<b>†</b>	Code:
	text radial-star sun" 30 "black" 30 20 50 "solid" "yellow"	1	
	Code: (overlay (text "sun" 30 "black") (radial-star 30 20 50 "solid" "yellow"))	1	Code:

3) Test your code in the editor and make sure it produces what you would expect it to.

### Which Value(s) Would it Make Sense to Define?

For each of the images below, identify which element(s) you would want to define before writing code to compose the image. Hint: what gets repeated?

### Writing Code using Defined Values

1) On the line below, write the Code to define PRIZE-STAR as a pink, outline star of size 65.

Using the PRIZE-STAR definition from above, draw the Circle of Evaluation and write the Code for each of the exercises. One Circle of Evaluation has been done for you.

2 The outline of a pink star that is three times the size of the original (using scale)	3 The outline of a pink star that is half the size of the original (using scale)
Circle of Evaluation:	Circle of Evaluation:
scale 3 PRIZE-STAR	
Code:	Code:
4 The outline of a pink star that is rotated 45 degrees (It should be the same size as the original.)	5 The outline of a pink star that is three times as big as the original <b>and</b> has been rotated 45 degrees
Circle of Evaluation:	Circle of Evaluation:
Code:	Code:
6) How does defining values help you as a programmer?	

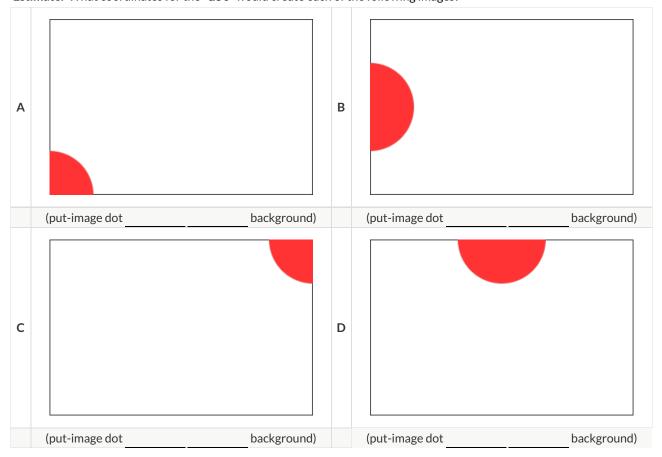

### **Estimating Coordinates**

Think of the background image as a sheet of graph paper with the origin (0,0) in the bottom left corner.

The numbers in put-image specify a point on that graph paper, where the center of the top image should be placed.

The width of the rectangle is 300 and the height is 200. The definitions for dot and background are: (define dot (circle 50 "solid" "red")) (define background (rectangle 300 200 "outline" "black"))

**Estimate:** What coordinates for the dot would create each of the following images?

### **Decomposing Flags**

Each of the flags below is shown with their width and height. Identify the shapes that make up each flag. Use the flag's dimensions to estimate the dimensions of the different shapes. Then estimate the x and y coordinates for the point at which the center of each shape should be located on the flag. Hint: The bottom left corner of each flag is at (0,0) and the top right corner is given by the flags dimensions.

### **Notice and Wonder**

As you investigate the Game Starter File with your partner, record what you Notice, and then what you Wonder. Remember, "Notices" are statements, not questions.

What do you Notice?	What do you Wonder?

### **Defining Functions**

Functions can be viewed in *multiple representations*. You already know one of them: *Contracts*, which specify the Name, Domain, and Range of a function. Contracts are a way of thinking of functions as a *mapping* between one set of data and another. For example, a mapping from Numbers to Strings:

```
f :: Number -> String
```

Another way to view functions is with *Examples*. Examples are essentially input-output tables, showing what the function would do for a specific input:

In our programming language, we focus on the last two columns and write them as code:

```
(EXAMPLE (f 1) (+ 1 2))
(EXAMPLE (f 2) (+ 2 2))
(EXAMPLE (f 3) (+ 3 2))
(EXAMPLE (f 4) (+ 4 2))
```

Finally, we write a formal **function definition** ourselves. The pattern in the Examples becomes *abstract* (or "general"), replacing the inputs with *variables*. In the example below, the same definition is written in both math and code:

```
f(x) = x + 2 (define (f x) (+ x 2))
```

Look for connections between these three representations!

- The function name is always the same, whether looking at the Contract, Examples, or Definition.
- The number of inputs in the Examples is always the same as the number of types in the Domain, which is always the same as the number of variables in the Definition.
- The "what the function does" pattern in the Examples is almost the same in the Definition, but with specific inputs replaced by variables.

### **Matching Examples and Definitions (Math)**

Look at each set of examples on the left and circle what is changing from one example to the next.

Then, *match* the examples on the left to the contracts that describe them.

30

2(30) + 1

Example	s:		Functions:
x	f(x)		
1	2  imes 1		
2	2  imes 2	1	A  f(x) = x - 3
3	2  imes 3		
x	f(x)		
15	15 - 3		
		2 E	f(x) = 2x
25	25 - 3		
35	35 - 3		
x	f(x)		
10	10 + 2		
15	15 + 2	3	f(x) = 2x + 1
20	20 + 2		
x	f(x)		
0	3(0)-2		
		4	f(x) = 3x - 2
1	3(1) - 2		
2	3(2) - 2		
x	f(x)		
10	2(10) + 1		
20	2(20) + 1	5	f(x) = x + 2

### **Matching Examples and Function Definitions**

Highlight the variables in gt and label them with the word "size".

```
(EXAMPLE
  (gt 20)
  (triangle 20 "solid" "green"))
(EXAMPLE
  (gt 45)
  (triangle 45 "solid" "green"))
(define (gt size) (triangle size "solid" "green"))
```

Highlight and label the variables in the example lists below. Then, using <code>gt</code> as a model, match the examples to their corresponding function definitions.

Examples			Definition
<pre>(EXAMPLE   (f 30) (circle 8 "solid" "red")) (EXAMPLE   (f 10) (circle 8 "outline" "red"))</pre>	1	А	<pre>(define (f s) (star s "outline" "red") )</pre>
(EXAMPLE   (f 2) (+ 2 2)) (EXAMPLE   (f 4) (+ 4 4)) (EXAMPLE   (f 5) (+ 5 5))	2	В	(define (f num) (+ num num))
<pre>(EXAMPLE   (f "red") (circle 7 "solid" "red")) (EXAMPLE   (f "orange")   (circle 7 "solid" "teal"))</pre>	3	С	(define (f c) (star 9 "solid" c))
<pre>(EXAMPLE   (f "red") (star 9 "solid" "red")) (EXAMPLE   (f "grey") (star 9 "solid" "grey")) (EXAMPLE   (f "pink") (star 9 "solid" "pink"))</pre>	4	D	<pre>(define (f r) (circle 8 s "red"))</pre>

# Match each set of examples (left) with the contract that best describes it(right).

Examples			Contract
(EXAMPLE (f 5) (/ 5 2)) (EXAMPLE (f 9) (/ 9 2)) (EXAMPLE (f 24) (/ 24 2))	11	4	; f :: Number -> Number
<pre>(EXAMPLE   (f 1)     (rectangle 1 1 "outline" "red"))   (EXAMPLE     (f 6)     (rectangle 6 6 "outline" "red"))</pre>	7	ω	; f :: String -> Image
<pre>(EXAMPLE   (f "pink" 5)         (star 5 "solid" "pink"))   (EXAMPLE         (f "blue" 8)         (star 8 "solid" "blue"))</pre>	м	U	; f :: Number -> Image
<pre>(EXAMPLE   (f "Hi!") (text "Hi!" 50 "red"))   (EXAMPLE    (f "Ciao!") (text "Ciao!" 50 "red"))</pre>	4	Q	; f :: Number, String -> Image

### Contracts, Examples & Definitions

gt

		gt	
<b>Directions</b> : Define a function calle	d gt , which makes so	olid green triangles of whatever size we want.	
Every contract has three parts			
; gt :	Numbe	er -> Image	
function name	domain	range	
Write some examples, then circle and	l label what changes		
(EXAMPLE (gt	10	) (triangle 10 "solid" "green") )	
function name	input(s)	what the function produces	
(EXAMPLE (gt	20	) (triangle 20 "solid" "green") )	
function name	input(s)	what the function produces	
Write the definition, giving variable i	names to all your input v	values	
(define (gt	size )		
function name	variable(s)		
(triangle size "solid"	"green")	)	
Pinations Defend (matingally		bc	
	d bc , which makes so	olid blue circles of whatever radius we want.	
Every contract has three parts			
;		->	
function name	domain	range	
Write some examples, then circle and	l label what changes		
(EXAMPLE (		))	
function name	input(s)	what the function produces	
(EXAMPLE (		))	
function name	input(s)	what the function produces	
Write the definition, giving variable i	names to all your input v	values	
(define (	)		
function name	variable(s)		

What's on your mind?

### **Solving Word Problems**

Being able to see functions as Contracts, Examples or Definitions is like having three powerful tools. These representations can be used together to solve word problems!

- 1) When reading a word problem, the first step is to figure out the **Contract** for the function you want to build. Remember, a Contract must include the Name, Domain and Range for the function!
- 2) Then we write a **Purpose Statement**, which is a short note that tells us what the function *should do*. Professional programmers work hard to write good purpose statements, so that other people can understand the code they wrote!
- 3) Next, we write at least two **Examples**. These are lines of code that show what the function should do for a *specific* input. Once we see examples of at least two inputs, we can *find a pattern* and see which parts are changing and which parts aren't.
- 4) To finish the Examples, we circle the parts that are changing, and label them with a short variable name that explains what they do.
- 5) Finally, we define the function itself! This is pretty easy after you have some examples to work from: we copy everything that didn't change, and replace the changeable stuff with the variable name!

### **Creating Contracts From Examples**

Write the contracts used to create each of the following collections of examples.

```
1)
(EXAMPLE
  (big-triangle 100 "red")
  (triangle 100 "solid" "red"))
(EXAMPLE
  (big-triangle 200 "orange")
  (triangle 200 "solid" "orange"))
2)
(EXAMPLE
  (purple-square 15)
  (rectangle 15 15 "outline" "purple"))
  (purple-square 6)
  (rectangle 6 6 "outline" "purple"))
3)
(EXAMPLE
  (banner "Game Today!")
  (text "Game Today!" 50 "red"))
(EXAMPLE
  (banner "Go Team!")
  (text "Go Team!" 50 "red"))
(EXAMPLE
  (banner "Exit")
  (text "Exit" 50 "red"))
4)
(EXAMPLE
  (twinkle "outline" "red")
  (star 5 "outline" "red"))
(EXAMPLE
  (twinkle "solid" "pink")
  (star 5 "solid" "pink"))
(EXAMPLE
  (twinkle "outline" "grey")
  (star 5 "outline" "grey"))
5)
(EXAMPLE
  (half 5) (/ 5 2))
(EXAMPLE
  (half 8) (/ 8 2))
(EXAMPLE
  (half 900) (/ 900 2))
```

### Writing Examples from Purpose Statements

We've provided contracts and purpose statements to describe four different functions. Write examples for each of those functions.

Contract and	Purpose Statement							
Every contract has	three parts							
;upside-dow	n :	Imag	е		->	Image		
function name	÷	domain				range	_	
; Consumes ar	n image, and flips it	upside down by ro	tating it 180	degrees.				
		what does th	ne function do?					
Examples								
Write some exampl	es, then circle and label wh	at changes						
(EXAMPLE (				)				
_	function name	input(s)					)	
		what the func	tion produces				<del></del>	
(EXAMPLE (			)					
	function name	input(s)					)	
		what the func	tion produces					
Contract and	Purpose Statement							
Every contract has	three parts							
;product-sq	uared:	Number	Number		->	Number		
function nan	ne	doma	in			range		
; Consumes tv	vo numbers and squ	uares their product						
		what does th	ne function do?					
Examples								
Write some exampl	es, then circle and label wh	at changes						
(EXAMPLE (			)				)	
_	function name	input(s)		what the fu	nction produc	es	_	
(EXAMPLE (			)				)	
_	function name	input(s)		what the fu	nction produc	es	_	

### Word Problem: rocket-height

**Directions**: A rocket blasts off, traveling at 7 meters per second. Use the Design Recipe to write a function rocket-height, which takes in a number of seconds and calculates the height.

Contract ar	nd Purpose Statemer	nt			
Every contract h	as three parts				
;	:			->	
function no	ame		domain		range
;					
		wh	at does the function	n do?	
Examples					
Write some exar	nples, then circle and labe	l what changes			
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
Definition					
Write the definit	tion, giving variable names	s to all your input valu	ies		
(define (			)		
-	function name	variable(s)			
					)
		what the fun	ction does with thos	e variable(s)	

## Writing Quality Purpose Statements

### The Design Recipe - Direct Variation

**Directions**: Write a function minimum-wage, that takes in a number of hours worked and returns the amount a worker will get paid at \$10.25/hr.

Contract and P	urpose Statement				
Every contract has th	ree parts				
;	:			->	
function name		do	main		range
;					
		what	does the function do	) \$	
Examples					
Write some examples	s, then circle and label w	hat changes			
(EXAMPLE (			)		)
	function name	input(s)		what the function produces	
(EXAMPLE (			)		)
	function name	input(s)		what the function produces	
Definition					
Write the definition,	giving variable names to	all your input values.			
(define (			)		
f	unction name	variable(s)	_		
					)
		what the function	on does with those v	ariable(s)	
				gabike. Write a function cal	ories-burned that
takes in the num	ber of minutes you	bike and returns t	the number of o	alories burned	
Contract and P	urpose Statement				
Every contract has th					
				->	
function name	<u> </u>		domain	<del></del>	range
•			domain		range
,		what	does the function do	2	
Examples					
•	s, then circle and label w	that changes			
(EXAMPLE (	, there energy and laber vi	That changes	)		)
( L/0 ii ii LL (	function name	input(s)		what the function produces	
(EXAMPLE (	Tonellorrhame	111001(3)	)	what the folicitor produces	)
( LXXIII LL (	function name	input(s)		what the function produces	
Definition	Tonenormanie	111001(3)		what the folicitor produces	
	giving variable names to	all your input values			
	giving variable names to	o an your imput values.			
(define (	f ti				
	function name	variable(s)			<b>\</b>

### The Design Recipe (Practice 1)

**Directions**: Write a function marquee that takes in a message and returns that message in large gold letters.

Contract and	Purpose Statemen	t				
Every contract has	three parts					
;	:			->		
function nam	е	dome	ain		range	_
;						
		what do	es the function o	qoş		
Examples						
Write some examp	les, then circle and label	what changes				
(EXAMPLE (			)		)	
_	function name	input(s)	<u> </u>	what the function produces		
(EXAMPLE (			)		)	
	function name	input(s)		what the function produces		
Definition						
Write the definitio	n, giving variable names	to all your input values				
(define (		)				
	function name	variable(s)				
						)
		what the function	does with those	variable(s)		
Directions · W	rite a function num	-cube that takes in	n a number a	nd returns the cube of that nu	ımber	
	Purpose Statemen	t				
Every contract has	three parts					
;	<u>:</u>			->		_
function nam	е	dome	ain		range	
;						
-		what do	es the function o	do?		
Examples						
•	oles, then circle and label	what changes				
(EXAMPLE (			)		)	
	function name	input(s)		what the function produces		
(EXAMPLE (_			)		)	
	function name	input(s)		what the function produces		
Definition						
	n, giving variable names	to all your input values				
(define (		)				
	function name	variable(s)				
						)

### The Design Recipe (Practice 2)

**Directions**: Write a function split-tab that takes in a cost and the number of people sharing the bill and splits the cost equally.

Contract an	d Purpose Statemen	t			
Every contract h	is three parts				
;	:			->	
function na	ne	domo	ain		range
;					
		what do	es the function o	do ŝ	
Examples					
Write some exam	ples, then circle and label	what changes			
(EXAMPLE (			)		)
	function name	input(s)		what the function produces	
(EXAMPLE (			)		)
	function name	input(s)		what the function produces	
Definition					
Write the definit	on, giving variable names	to all your input values			
(define (		)			
_	function name	variable(s)			
					)
		what the function	does with those	variable(s)	
Contract an	d Purpose Statemen			cost of a meal and returns the	
Every contract h	is three parts				
;	:			-> 	
function no	me	don	nain		range
;					
Formulas		what do	es the function o	40.5	
Examples					
	ples, then circle and label	what changes	,		,
(EXAMPLE (			/		)
/EVAMBLE /	function name	input(s)	,	what the function produces	,
(EXAMPLE (			/		)
D ( '''	function name	input(s)		what the function produces	
Definition					
	on, giving variable names	to all your input values			
(define (_			)		
	function name	variable(s)			,
					)
		what the function	does with those	variable(s)	

### The Design Recipe (Practice 3)

**Directions**: The Swamp in the City Festival is ordering t-shirts. The production cost is \$75 to set up the silk screen and \$9 per shirt. Write a function min-shirt-price that takes in the number of shirts to be ordered, n, and returns the minimum amount the festival should charge for the shirts in order to break even. (Assume that they will sell all of the shirts.)

Contract and	Purpose Statement				
Every contract has	three parts				
;	:			->	
function nan	ne	dor	main		range
;					
		what doe	s the function do?	?	
Examples					
Write some exampl	les, then circle and label wh	at changes			
(EXAMPLE (			)		)
_	function name	input(s)		what the function produces	
(EXAMPLE (			)		)
_	function name	input(s)		what the function produces	
Definition					
Write the definition	n, giving variable names to	all your input values			
(define (			)		
	function name	variable(s)			
					)

### The Design Recipe (Slope/Intercept 1)

**Directions**: For his birthday, James' family decided to open a savings account for him. He started with \$50 and committed to adding \$10 a week from his afterschool job teaching basketball to kindergartners. Write a function savings that takes in the number of weeks since his birthday and calculates how much money he has saved.

Contract a	nd Purpose Statemen	t			
Every contract I	has three parts				
;	:			->	
function no	ame	dor	main	ran	ge
;					
		what c	does the function (	qoş	
Examples					
Write some exa	mples, then circle and label	what changes			
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
Definition					
Write the defini	ition, giving variable names	to all your input values			
(define (			)		
	function name	variable(s)			
					)
		what the functio	n does with those	variable(s)	
truck. The tr	uck is \$55 per day and	l each driven mile is		number of miles driven and returns	the cost of renting
Contract a	nd Purpose Statemen	t			
Every contract l	has three parts				
;	:			->	
function no	ame	dor	main	ran	ge
;					
		what c	does the function (	qoş	
Examples					
Write some exa	mples, then circle and label	what changes			
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
(EXAMPLE	(		)		)
	function name	input(s)		what the function produces	
Definition					
Write the defini	ition, giving variable names	to all your input values			
(define (			)		

### The Design Recipe (Negative Slope/Intercept)

**Directions**: An Olympic pool holds 660,000 gallons of water. A fire hose can spray about 250 gallons per minute. Write a function pool that takes in the number of minutes that have passed and calculates how much water is still needed to fill it.

Contract and	d Purpose Statemen			
very contract ha	s three parts			
	:		->	
function nam	me	domain	rang	ge
i				
		what does the function	n do?	
Examples				
Vrite some exam <sub>l</sub>	ples, then circle and label	what changes		
EXAMPLE (		)		)
-	function name	input(s)	what the function produces	
EXAMPLE (		)		)
-	function name	input(s)	what the function produces	
Definition				
Vrite the definition	on, giving variable names	to all your input values		
define (		)		
	function name	variable(s)		
				)
		what the function does with tho	se variable(s)	<u> </u>

### **Problem Decomposition**

- Sometimes a problem is too complicated to solve all at once. Maybe there are too many variables, or there is just so much information that we can't get a handle on it!
- We can use **Problem Decomposition** to break those problems down into simpler pieces, and then work with the pieces to solve the whole. There are two strategies we can use for decomposition:
  - **Top-Down** Start with the "big picture", writing functions or equations that describe the connections between parts of the problem. Then, work on defining those parts.
  - Bottom-Up Start with the smaller parts, writing functions or equations that describe the parts we understand.
     Then, connect those parts together to solve the whole problem.
- You may find that one strategy works better for some types of problems than another, so make sure you're comfortable using either one!

### The Design Recipe: Revenue & Cost

**Directions**: Use the Design Recipe to write a function revenue, which takes in the number of glasses sold at \$1.75 apiece and calculates the total revenue.

Contract an	nd Purpose Statemer	nt				
Every contract h	as three parts

		what the fun	ction does with thos	e variable(s)	

### **Inequalities**

- Sometimes we want to *ask questions* about data. For example, is x greater than y? Is one string equal to another?

  These questions can't be answered with a Numbers. Instead, they are answered with a new data type called a **Boolean**.
- Video games use Booleans for many things: asking when a player's health is equal to zero, whether two characters are close enough to bump into one another, or if a character's coordinates put it off the edge of the screen.
- A Boolean value is either true or false . Unlike Numbers, Strings, and Images, Booleans have only two possible values.
- You already know some functions that produce Booleans, such as < and > ! Our programming language has them, too: (< 3 4), (> 10 2), and (= -10 19).
- We also have ways of writing **Compound Inequalities**, so we can ask more complicated questions using the and and or functions.
  - o (and (> 3 4) (< 10 2)) translates to "three is less than four *and* ten is less than two". This will evaluate to false, since the and function requires that both sub-expressions be true.
  - $\circ$  (or (> 3 4) (< 10 2)), which translates to "three is less than four *or* ten is less than two". This will evaluate to true, since the or function only requires that one sub-expression be true.
- The Circles of Evaluation work the same way with Booleans that they do with Numbers, Strings and Images:

Boolean Functions			
Explore the functions in the Booleans Starter File . What characteristics define them as Booleans?			
Fill in the blanks below so that each of the five functions returns true  1) (is-odd )			
2) (is-even)			
3)(is-less-than-one)			
4)(is-continent)			
5)(is-primary-color)			
Fill in the blanks below so that each of the five functions returns false			
6) (is-odd)			
7)(is-even)			
8)(is-less-than-one)			
9)(is-continent)			

10)(is-primary-color \_\_\_\_\_)

### Simple Inequalities

Each inequality expression in the first column contains a number.

Decide whether or not that number is a solution to the expression and place it in the appropriate column.

Then identify 4 solution and 4 non-solution values for  $\ \mathbf{x}$ .

- Solutions will make the expression true .
- Non-Solutions will make the expression false .

Challenge yourself to use negatives, positives, fractions, decimals, etc. for your  $\, \mathbf{x} \,$  values.

Expression	4 solutions that evaluate to true	4 non-solutions that evaluate to false
(> x 2)		
(<= x -2)		
(< x 3.5)		
(>= x -1)		
(> x -4)		
(<> x 2)		

(<> x 2)		
1) For which inequalities was	the number from the expression part of the	solution?
2) For which inequalities was	the number from the expression not part of	the solution?
3) For which inequalities were	e the solutions on the left end of the numbe	r line?
4) For which inequalities were	e the solutions on the right end of the numb	er line?

### **Converting Circles of Evaluation to Code**

For each Circle of Evaluation on the left-hand side, write the code for the Circle on the right-hand side

rorea	For each Circle of Evaluation on the left-hand side, write the code for the Circle on the right-hand side				
	Circle of Evaluation	Code			
1	> + 9 4 5				
2	and <				
3	or  string=? yum "apple"  yum "banana"				
4	>= String-length "My Game"				

#### **Compound Inequalities — Practice**

Create the Circles of Evaluation, then convert the expressions into code in the space provided. 1) 2 is less than 5, and 0 is equal to 6 What will this evaluate to? 2) 6 is greater than 8, or -4 is less than 1 What will this evaluate to? 3) The String "purple" is the same as the String "blue", and 3 plus 5 equals 8

What will this evaluate to?

4) Write the contracts for and & or in your Contracts page.

#### Compound Inequalities: Solutions & Non-Solutions

For each Compound Inequality listed below, identify 4 solutions and 4 non-solutions. If there are **no solutions** or the solution set includes **all real numbers** you can write that instead of making a list.

- Solutions for *intersections*, which use **and** will make both of the expressions true.
- Solutions for *unions*, which use **or** will make at least one of the expressions true.

Pay special attention to the numbers in the sample expression! Challenge yourself to use negatives, positives, fractions, decimals, etc. for your x values.

The first two have been done for you - Answers will vary!

Expression	4 solutions that evaluate to true	4 non-solutions that evaluate to false
x > 5 and x < 15	6, 9.5, 12, 14.9	-2, 5, 15, 16.1
x > 5 or x < 15	All real numbers	No non-solutions
$x \le -2$ and $x > 7$		
x <= -2  or  x > 7		
x < 3.5  and  x > -4		
x < 3.5  or  x > -4		
$x \ge -1$ and $x \ge -5$		
$x \ge -1 \text{ or } x \ge -5$		
x < -4 and $x > 2$		

	your thinking.	no solutions? Explain	1) Could there ever be a union with
--	----------------	-----------------------	-------------------------------------

2) Could there ever be an intersection whose solution is all real numbers? Explain your thinking.

## **Compound Inequality Functions**

Each of the plots below was generated using the code

inequality(comp-ineq, [list: -1, 0, 1.6, 3, 5.2, 7, 8.1, 9]). With the exception of the example, each plot below was defined using the numbers 3 and 7. Write the code for how comp-ineq was defined for each plot in the space provided.

#### Sam the Butterfly

Open the "Sam the Butterfly" starter file and press "Run". (Hi, Sam!) Move Sam around the screen using the arrow keys. 1) What do you notice about the program? 2) What do you wonder? 3) What do you see when Sam is at (0,0)? Why is that? 4) What changes as the butterfly moves left and right? Sam is in a  $640 \times 480$  yard. Sam's mom wants Sam to stay in sight. How far to the left and right can Sam go and still remain visible? Use the new inequality functions to answer the following questions with code: 5) Sam hasn't gone off the left edge of the screen as long as... 6) Sam hasn't gone off the right edge of the screen as long as... 7) Use the space below to draw Circles of Evaluation for these two expressions:

## Left and Right

Directions: Use the Design Recipe to write a function safe-left?, which takes in an x-coordinate and checks to see if it is greater than -50.

Contract and Purpose Statemen	t				
Every contract has three parts					
;			->		
function name	domaii	n	<del></del>	range

(define (			)		
<del>-</del>	function name	variable(s)	<u></u>		
					)
		what the fund	tion door with those	variable(s)	

#### **Piecewise Functions**

- Sometimes we want to build functions that act differently for different inputs. For example, suppose a business charges \$10/pizza, but only \$5 for orders of six or more. How could we write a function that computes the total price based on the number of pizzas?
- In math, **Piecewise Functions** are functions that can behave one way for part of their Domain, and another way for a different part. In our pizza example, our function would act like cost(pizzas) = 10 \* pizzas for anywhere from 1-5 pizzas. But after 5, it acts like cost(pizzas) = 5 \* pizzas.
- Piecewise functions are divided into "pieces". Each piece is divided into two parts:
  - 1. How the function should behave
  - 2. The domain where it behaves that way
- Our programming language can be used to write piecewise functions, too! Just as in math, each piece has two parts:

```
(define (cost pizzas)
  (cond
    [(>= pizzas 6) (* 5 pizzas)])
```

Piecewise functions are powerful, and let us solve more complex problems. We can use piecewise functions in a video game to add or subtract from a character's x-coordinate, moving it left or right depending on which key was pressed.

#### Welcome to Alice's Restaurant!

Alice has hired you to improve some code used at the restaurant. The code we'll be improving on is shown below.

Read through the code line-by-line with your partner before writing down your observations in the tables below.

```
; cost :: String -> Number
; given a item, produce the cost of that item
(define (cost item)
  (cond
     [(string=? item "onion rings") 3.5]
     [(string=? item "fried tofu") 5.25]
     [(string=? item "pie") 2.25]
     [else "Sorry, that's not on the menu!"])
```

1 I notice	2 I wonder
3 Familiar things I see in the code	4) Unfamiliar things I see in the code
3 Familiar things I see in the code	4) Unfamiliar things I see in the code
3 Familiar things I see in the code	4) Unfamiliar things I see in the code
3 Familiar things I see in the code	4) Unfamiliar things I see in the code
3 Familiar things I see in the code	4) Unfamiliar things I see in the code
3 Familiar things I see in the code	4) Unfamiliar things I see in the code

### Alice's Restaurant - Explore

Alice's code has some new elements we haven't seen before, so let's experiment a bit to figure out how it works! **Open the** "Alice's Restaurant starter file, click "Run", and try using the cost function in the Interactions window.

1) What does (cost "hamburger") evalu	ate to?	
2) What does (cost "pie") evaluate to? _		<u> </u>
3) Whatifyou ask for (cost "fries")?		_
4) Explain what the function is doing in your o	own words.	
5) What is the function's name?		Range?
6) What is the name of its variable?		
7) Alice says onion rings have gone up to \$3.7	'5. Change the cost function	to reflect this.
8) Try adding menu items of your own. What's	s your favorite?	
9) For an unknown food item, the function proof why not?	oduces the String "That's n	ot on the menu!" Is this a problem? Why
	_	
10) Suppose Alice wants to calculate the price	e of a hamburger, including a 5%	6 sales tax . Draw a Circle of Evaluation for the

expression below.

#### Word Problem: order

**Directions**: Alice's Restaurant has hired you as a programmer. They offer the following menu items: hamburger (\$6.00), onion rings (\$3.50), fried tofu (\$5.25) and pie (\$2.25). Write a function called order which takes in the name of a menu item and outputs the price of that item.

what the function does with those variable(s)

#### Word Problem: update-player

**Directions**: The player moves up and down by 20 pixels each time. Write a function called update-player, which takes in the player's y-coordinate and the name of the key pressed ("up" or "down"), and returns the new y-coordinate.

Contract and Purpose Statement					
Every contract has three parts					
; :			->		
function name	dom	ain	rang	e	
;					_
	what do	es the fun	ction do?		
Examples					
Write some examples, then circle and label w	vhat changes

what the function does with those variable(s)

## Challenges for update-player

For each of the challenges below, see if you can come up with two EXAMPLEs of how it should work!

1) Warping	- Program one key to "warp" the player to a set location, such as the co	enter of the screen.	
(EXAMPLE	(update-player	)	)
(EXAMPLE	(update-player	)	)
2) Boundario	es - Change update-player such that PLAYER cannot move off	the top or bottom of the sc	reen.
(EXAMPLE	(update-player	)	)
(EXAMPLE	(update-player	)	)
	g - Add code to update-player such that when PLAYER moves and vice versa.	to the top of the screen, it re	eappears at
(EXAMPLE	(update-player	)	)
(EXAMPLE	(update-player	)	)
4) Hiding - A	Add a key that will make PLAYER seem to disappear, and reappear w	hen the same key is pressec	d again.
(EXAMPLE	(update-player	)	)
(EXAMPLE	(undate-player	1	)

#### Word Problem: line-length

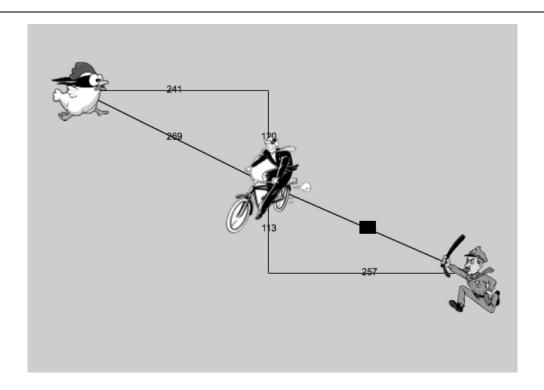

**Directions**: Write a function called 'line-length', which takes in two numbers and returns the **positive difference** between them. It should always subtract the smaller number from the bigger one. If they are equal, it should return zero.

Contract a	ınd Purpose Statemei	nt								
Every contract	has three parts									
;	:							->		
function r	name		dom	ain				ro	ange

#### **Writing Code to Calculate Missing Lengths**

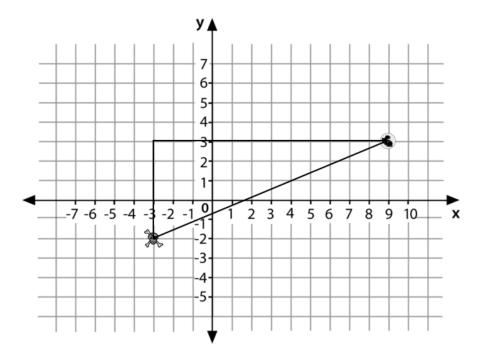

In each of the game screenshots below, one of the distance labels has been hidden. Write the code to generate the missing distance on the line below each image. Hint: Remember the Pythagorean Theorem!

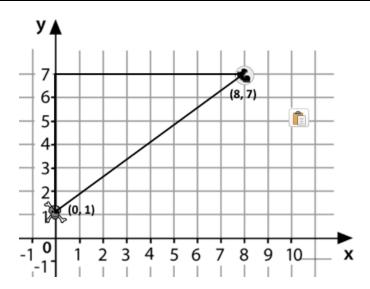

## Distance on the Coordinate Plane

Distance between the pyret and the boot:

Explain how the code works.

Now write the code to find the distance between this boot and pyret. \\

#### The Distance Between (0, 2) and (4, 5)

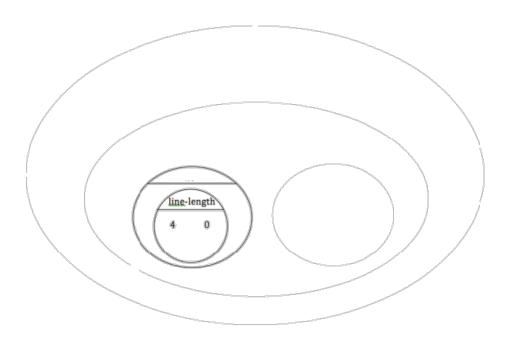

The distance between  $x_1$  and  $x_2$  is computed by (line-length x1 x2). The distance between  $y_1$  and  $y_2$  is computed by (line-length y1 y2). Below is the equation to compute the hypotenuse of a right triangle with those amount for legs:

$$\sqrt{line ext{-}length(x_1,x_2)^2+line ext{-}length(y_1,y_2)^2}$$

Suppose your player is at (0,2) and a character is at (4,5). What is the distance between them? With your pencil, label which numbers represent  $x_1, y_1, x_2$  and  $y_2$ . The equation to compute the distance between these points is:

$$\sqrt{line ext{-}length(0,4)^2 + line ext{-}length(2,5)^2}$$

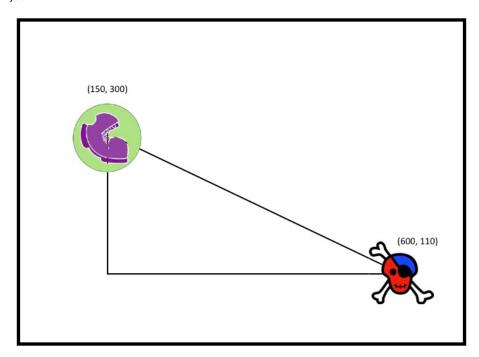

1. Translate the expression above, for (0,2) and (4,5) into a Circle of Evaluation below.

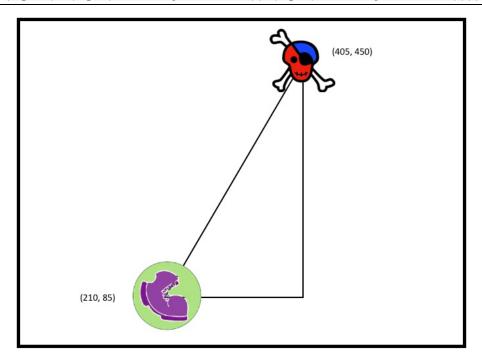

2. Convert the Circle of Evaluation to Code below.

#### **Distance From Game Coordinates**

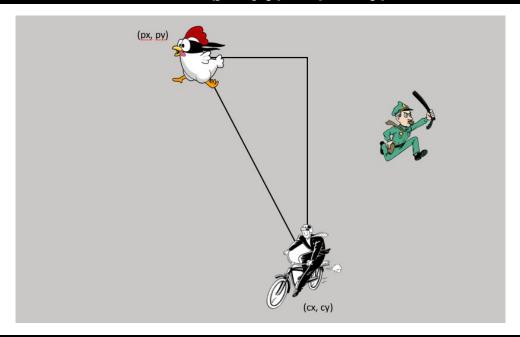

For each of the game screenshots, write the code to calculate the distance between the indicated characters. *The first one has been done for you.* 

(sqrt (+ (sqr (line-length 600 150)) (sqr (line-length 110 300))))

## Distance (px, py) to (cx, cy)

#### **Word Problem: distance**

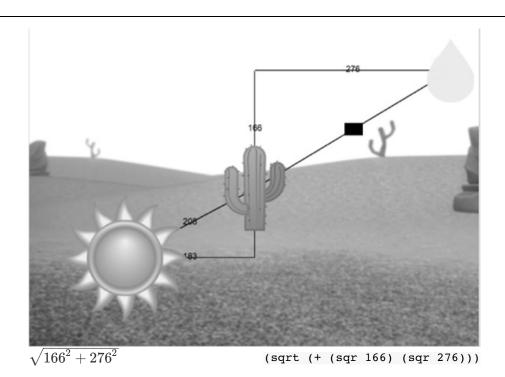

**Directions**: Use the Design Recipe to write a function distance, which takes in FOUR inputs: px and py (the x- and y-coordinate of the Player) and cx and cy (the x- and y-coordinates of another character). coordinates of two objects and produces the distance between them in pixels.

### **Comparing Code: Finding Missing Distances**

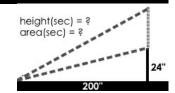

For each of the game screenshots below, the math and the code for computing the covered distance is shown. Notice what is similar and what is different about how the top and bottom distances are calculated. Think about why those similarities and differences exist and record your thinking.

#### **Top Down/Bottom Up**

A retractable flag pole starts out 24 inches tall, and grows taller at a rate of 0.6 in/sec. An elastic is anchored 200 inches from the base and attached to the top of the pole, forming a right triangle. Using a top-down or bottom-up strategy, define functions that compute the *height* of the pole and the *area* of the triangle after a given number of seconds.

**Directions**: Define your first function (height or area) here.
